# 76mm HE-M77 Naval Ammunition

High-Explosive round for OM 76/62mm guns

**High-Explosive round components:** The round is composed of a steel body with an HE charge of pressed Comp. A3 and a Point Detonating (PD) fuze with selective super quick (SQ) or delay modes. The brass cartridge case crimped to the projectile contains a mechanical percussion primer and M6+2 propellant. A metal clip over the cartridge case base protects the primer tube, which contains an 18-gram black powder charge.

## Round operation:

- **Firing:** Striking the percussion primer ignites the black powder charge in the primer tube, which ignites the propellants to impart velocity
- **Impact:** Upon impact, the preset fuze detonates the HE filler to produce blast and fragmentation effects

**Packaging:** Each round is packed in a fiber container, with two containers packed in a plywood box.

## Key Features

- Weight of complete round: 12.4kg
- Projectile weight with fuze: 6.2kg
- Maximum range: 16,200m
- Muzzle velocity: 930 m/s
- Blast and fragmentation effects

## Key Benefits

- High-fragmentation projectile
- Against surface, ship and aircraft targets
- Compatible with all OM 76/62mm naval guns
